

# Hello Word

Making Game with Python (1)

Zhihong (John) Zeng & Andrew Zeng

# Today

- Review: python basic
- String and string operator
- Input
- Print
- Save a program
- Hello World Game
- Exercise

# Python Basic

- A program is a sequence of definitions and commands
- Python primitives: e.g., number, string, operators
- Syntax: Combine objects and operators to form expressions

# Primitives

- Number:
  - int, float
  - +, -, \*, /
- Bool:
  - True/False
  - or/and
- String:
  - +, lower(), upper()
- NoneType: None
- Type conversion:  $\text{int}(x) \longleftrightarrow \text{str}(x)$

# Binding Variables and Values

- Equal sign is an assignment of a value to a variable name
  - $\text{Pi} = 3.14$
  - $\text{Pi\_approx} = 22/7$
- Value stored in computer memory
- An assignment binds name to value:  $x=5$
- Retrieve value associated with name or variable by invoking the name
- **Variable is case-sensitive**

# String

- String can be created by single quote or double quote
  - `x='this is a string'`
  - `y="this is string also"`
- Combination of single quote and double quote
  - `"I don't like this type pizza"`
  - `'He said "that is ok", then left'`
  - `'I don't like this type pizza' ??`

# String operators

- `'this is ' + ' a test'`
- `int('123')`
- `float('123.45')`
- `'aBc'.lower()`
- `'aBc'.upper()`
- `'This is a test'.title()`
- `len('aBc')`
- `'I saw a dog'.find('dog')`
- `'I saw a dog'.replace('dog', 'cat')`
- `'I saw a dog'.split('a')`

# Input

- input is a build-in function allowing a user to input
- Syntax:
  - input(prompt)
    - Prompt: a string representing a message before input
    - Return: a input string from keyboard
- Example:
  - name = input('What is your name')
  - print(name)
  - age = input('how old are you?')
  - age = int(age)

# print

- print is a build-in function to print the message to screen or other standard output device.
- Syntax:
  - `print(object(s), sep=separator, end=end, file=file, flush=flush)`
    - *object(s)*: Any object, and as many as you like. Will be converted to string before printed
    - *sep='separator'*: Optional. Specify how to separate the objects, if there is more than one. Default is ' '
    - *end='end'*: Optional. Specify what to print at the end. Default is '\n' (line feed)
    - *File*: Optional. An object with a write method. Default is `sys.stdout`
    - *Flush*: Optional. A Boolean, specifying if the output is flushed (True) or buffered (False). Default is False

# Print examples

- `print('apple', 'orange', 'banana')`
- `print('apple', 'orange', 'banana', sep=', ')`
- `print(1, 2, 3)`
- `print(1, 2, 3, sep='-', end='**')`
- `print()`
- `myname = 'John'`
- `print(f'My name is {myname}')`
- `a = 1`
- `b = 2`
- `print(f'{a} + {b} = {a+b}')`

# Save a program

- Open python IDLE
- File -> new file -> type your code -> save
- Run -> run module
- Or Open terminal
  - Windows: `py your_program`
  - Mac: `python3 your_program`

# Hello Word Game

- Open python IDLE
- File -> New file or shortcut key: ctr + n
- Typing
  - `# this is hello world program`
  - `print('Hello world!')`
  - `name = input('What is your name?')`
  - `print('It is nice to meet you, ' + name)`
  - `age = int(input('How old are you? '))`
  - `print(f'You will be {age+1} years old next year')`

# Hello World Game (cont)

- Save the program: File -> save or shortcut: ctr + s -> helloworld.py -> enter
- Run the program: Run -> run module or shortcut: F5
- Terminar: python helloworld.py

# Open computer -> Play

# String formatting with {} operator

- {} operator: place-holders of variables inside the string
- Example:
  - `print('{} will be {} next year'.format(name, age+1))`

# String split

- split method is to split a string into multiple items
- Syntax: `string.split(separator)`
- Example:
  - `a = 'She likes drawing dogs, cats, and pandas'`
  - `a.split(',')`
  - `a.split('and')`

# String join

- join method is to concatenate a list of strings
- Syntax: `string.join(list of strings)`
- Example:
  - `a = ['dog', 'cat', 'pandas']`
  - `' '.join(a)`
  - `'-'.join(a)`
  - `'and '.join(a)`
